New cooperative programs being launched to assist researchers in the biosciences. Wagner et al. have been awarded a grant from the National Institute of General Medical Sciences (NIGMS) to establish a new program called "CoMotion: Bioscience Careers." This program is designed to provide mentorship and support for early-career scientists in the biosciences, with a focus on promoting diversity and inclusion. In addition to the regular features and events of the CoMotion website, the new program will include regular mentoring and networking opportunities, with a special focus on diversity and inclusion. The program is open to all early-career scientists in the biosciences, and is expected to be popular among researchers in the field.

Innovation Training

CoMotion: Bioscience Careers will also be expanding its innovation training offerings. It will be launching a new series of workshops and seminars focused on entrepreneurship and innovation in the biosciences. The series will be led by industry experts and will cover a range of topics, including how to develop a business plan, how to find funding, and how to navigate the regulatory landscape.

Partnerships

We have recently partnered with the University of Washington (UW) to develop a new resource for researchers in the biosciences. The new resource is called "BioBash," and it is designed to help researchers connect with potential partners and investors. BioBash will be launched on the CoMotion website, and will provide a platform for researchers to share their ideas and technologies with potential partners and investors.

Recent News

CoMotion: Bioscience Careers has recently launched a new initiative called "COVID-19 Solutions." The initiative is focused on developing technologies and solutions to help combat the COVID-19 pandemic. Researchers from around the world are invited to submit proposals for solutions to the pandemic, and the best proposals will be awarded funding to help bring their ideas to reality.

Unbiased and Effective

CoMotion: Bioscience Careers is committed to promoting diversity and inclusion in the biosciences. The organization is dedicated to providing a welcoming and inclusive environment for all researchers, and is actively working to ensure that the organization's programs and activities are accessible to all researchers, regardless of their background or identity.
